

Recipe Application Search Function

To align with the prototype of the recipe app from the 1.0 Tasks, I will implement a search function that allows the user to search for recipes containing specific ingredients. I think the output should be a simple and easy chart.

What to Search For:

- Recipes

Criterion For Search:

- Ingredients within recipes

Format of Output:

- One of three types of charts

Data Analysis

Bar Chart:

- X-axis: Ingredient Name
- Y-axis: Number of Recipes

Pie Chart:

- Axis: Difficulty
- Labels: Difficulty values

Line Chart:

- X-axis: Cooking time
- Y-axis: Recipe Count

Execution Flow
